Install Prometheus on Ubuntu

Step1 : Update system packages and install dependencies.

Command: sudo apt update
sudo apt install -y apt-transport-https software-properties-common wget

---

Step2 : Install Prometheus.

Command: sudo apt install prometheus -y

Step3 : Important (Connect Node Exporter to Prometheus)

Edit Prometheus config:

Command: sudo nano /etc/prometheus/prometheus.yml

Add this inside Prometheus.yaml file:

```
- job_name: 'node_exporter'
  static_configs:
    - targets: ['localhost:9100']
```

Step4 : Start and enable the Prometheus service.

Command: sudo systemctl enable --now prometheus

Step5 : Verify Prometheus status.

Command: sudo systemctl status Prometheus

Step6 : Restart Prometheus when need.

Command: sudo systemctl restart prometheus
